

The 100 Angels Regions strategy
is a *bold plan* to make the
world safe for stroke.

It is a regional approach, mobilizing hospitals, emergency services, local authorities and public educators for one mission: delivering better outcomes for stroke patients. Working together, we can provide safe hands for stroke patients in their communities – but only if we act as one.
If one doesn't... nobody does.

That's the power of 100 Angels Regions:
a common goal turning goodwill into shared purpose.

Implementation of
awareness campaign

- Awareness education must meet an agreed target for FAST Heroes implementation* in elementary schools in the region.
- The target is calculated based on stroke incidence (number of new cases per population) in the region.
- Children who participate in the FAST Heroes program are each tasked with educating two grandparents.
- Therefore, the number of FAST Heroes participants required for Angels Region status is 0,5 of stroke incidence in the region.
- Please support FAST Heroes implementation by collaborating with local authorities and local patient support organizations to reach more schools and sharing your expertise with FAST Heroes agencies and teachers.

* Other awareness programs may qualify for this target. These will be evaluated on a case by case basis.

Achieve gold in the
EMS Angels Awards

- To meet the criterion for Angels Regions, EMS companies must achieve a minimum of gold in the EMS Angels Awards.
- To become eligible for an EMS Angels award, your EMS must first comply with a set of inclusion criteria.
- Next, data must be collected for at least 30 consecutive patients transported per quarter.
- The data has to be captured in RES-Q where you will be notified of your provisional award status.
- Your award status will be confirmed once your submission has been reviewed and approved by the national coordinator.
- Note that to qualify for an award, performance must meet awards criteria based on international guidelines and the experience of our international EMS Steering Committee.

Have enough
stroke-ready hospitals

- To become an Angels Region, you must reach regional targets for hospitals coverage.
- The optimal number of stroke-ready hospitals in any given region is determined by population and geography and agreed with the regional coordinator.
- This number is known as the regionally agreed target.
- If a region falls short of its regionally agreed target, the priority action will be to increase the number of stroke-ready hospitals.
- The Angels Initiative will help your region reach hospital coverage targets through a process of consultation, standardization, training and quality monitoring, supported by the stroke community in the region.
- Consider sharing your own knowledge and resources to help other hospitals in your region reach stroke-ready status.

Get all hospitals to
gold in the ESO/WSO
Angels Awards

- To reach Angels Region status, all hospitals in the stroke network must achieve at least gold status in the ESO/WSO Angels Awards.
- ESO/WSO Angels Awards are awarded quarterly to hospitals that meet a set of criteria based on international guidelines.
- To become eligible for an award, hospitals must capture treatment data for at least 30 consecutive stroke patients per quarter.
- Data must be captured in RES-Q or SITS.
- Your awards status will be confirmed once your submission has been reviewed and approved by your national coordinator.
- Diamond award winners are honored in national and international conferences.

Your Angels Consultant can help you

- Identify your region
- Agree targets across criteria
- Provide support and resources to reach Angels Regions goals

Angels consultants' contact details are in the Meet the Team section on the Angels website.
If there is no Angels consultant in your territory, please contact us on angelscoreteam@iqvia.com
